

Our Services

NT-Engineering participates since seven years in the program Certified Partner of Microsoft. We offer all services necessary to the setting up, to the good working and to the development of complex computer systems. Its team of professionals, formed and certified, is in permanent relation with the center of support and development of Microsoft.

NT-Engineering proposes the following benefits:

- survey of projects (hardware, software).
- surveillance and follow-up of projects.
- development of projects or applications advice and formation.
- maintenance of your system or your applications.

We work to the availability of your computer system 24 hours on 24 and 7 days on 7! Do you know that a modern hard disk does ~ 15'768'000'000 revolution for a life span of three years?

A modern technical support and organized well contributes to the good working of your system. An interfaces web for the management of the incidents permits you to communicate directly with our service of support.

Maintenance, regular services, and distant surveillance permits to guarantee the good working and the security of your networks and applications as well as to decrease the breakdowns, the stops of production and the expenses of displacement.

Of the existing networks to the modern networks to high debit while passing by the wireless networks, we help you to solve the problems of conception, of realization, of obstruction, of analysis of traffic, of research of breakdown, of security.

To consult her data out of his workplace? To finish an urgent work report? To reach his enterprise server dynamically? Of the data synchronization to the wireless networks, NT-Engineering brings you the mobility.

Of the server room to the teleworking as passing by the networks of NT-Engineering telecommunication and his partners helps you to think, to conceive, to achieve, to integrate all components necessary to your computer network of tomorrow.

Is the security of your data a preoccupation?

A high level of security is often a brake to the efficiency!

Without security work is faster but includes many risks!

The overvoltages, the flight, the viruses, fire are only some of the risk factors for your computer system. NT-Engineering helps you to estimate the computer risks specific to your enterprise and suggest you the solutions appropriated to forewarn of it.
